**2018** 

**2019** 

Absorption rate estimates the rate at which active listings are selling in a given market.

It's calculated by dividing the number of closed sales by the number of active listings.

A low absorption rate means that homes are selling slowly (suggesting a buyer's market) while a high absorption rate means that homes are selling quickly (suggesting a seller's market).

## **Closed Sales**

The number of sales transactions which closed during the month

**Economists' note**: Closed Sales are one of the simplest—yet most important—indicators for the residential real estate market. When comparing Closed Sales across markets of different sizes, we recommend comparing the percent changes in sales rather than the number of sales. Closed Sales (and many other market metrics) are affected by seasonal cycles, so actual trends are more accurately represented by year-over-year changes (i.e. comparing a month's sales to the amount of sales in the same month in the previous year), rather than changes from one month to the next.

Month	Closed Sales	Percent Change Year-over-Year
Year-to-Date	7,909	-0.7%
July 2019	1,298	8.6%
June 2019	1,178	-7.4%
May 2019	1,455	13.8%
April 2019	1,200	-2.0%
March 2019	1,179	-7.4%
February 2019	914	-1.7%
January 2019	685	-13.6%
December 2018	1,039	-8.6%
November 2018	985	-4.5%
October 2018	1,121	8.8%
September 2018	998	11.0%
August 2018	1,315	6.7%
July 2018	1,195	-1.1%

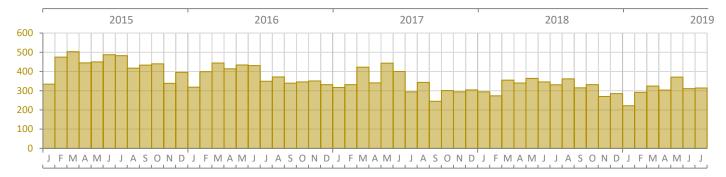

#### Cash Sales

The number of Closed Sales during the month in which buyers exclusively paid in cash

**Economists' note**: Cash Sales can be a useful indicator of the extent to which investors are participating in the market. Why? Investors are far more likely to have the funds to purchase a home available up front, whereas the typical homebuyer requires a mortgage or some other form of financing. There are, of course, many possible exceptions, so this statistic should be interpreted with care.

Month	Cash Sales	Percent Change Year-over-Year
Year-to-Date	2,137	-7.2%
July 2019	314	-5.1%
June 2019	311	-10.1%
May 2019	371	1.9%
April 2019	303	-10.9%
March 2019	324	-8.7%
February 2019	292	7.0%
January 2019	222	-24.5%
December 2018	285	-6.3%
November 2018	270	-8.2%
October 2018	332	10.3%
September 2018	315	28.6%
August 2018	362	5.5%
July 2018	331	12.6%

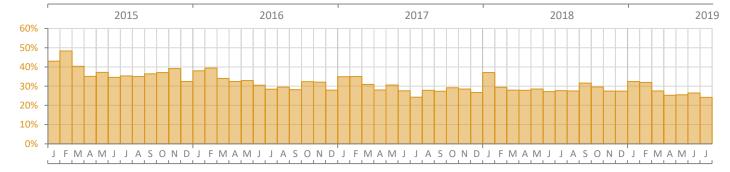

#### Cash Sales as a Percentage of Closed Sales

The percentage of Closed Sales during the month which were Cash Sales

**Economists' note**: This statistic is simply another way of viewing Cash Sales. The remaining percentages of Closed Sales (i.e. those not paid fully in cash) each month involved some sort of financing, such as mortgages, owner/seller financing, assumed loans, etc.

Month	Percent of Closed Sales Paid in Cash	Percent Change Year-over-Year
Year-to-Date	27.0%	-6.6%
July 2019	24.2%	-12.6%
June 2019	26.4%	-2.9%
May 2019	25.5%	-10.5%
April 2019	25.3%	-9.0%
March 2019	27.5%	-1.4%
February 2019	31.9%	8.5%
January 2019	32.4%	-12.7%
December 2018	27.4%	2.6%
November 2018	27.4%	-3.9%
October 2018	29.6%	1.4%
September 2018	31.6%	15.8%
August 2018	27.5%	-1.1%
July 2018	27.7%	14.0%

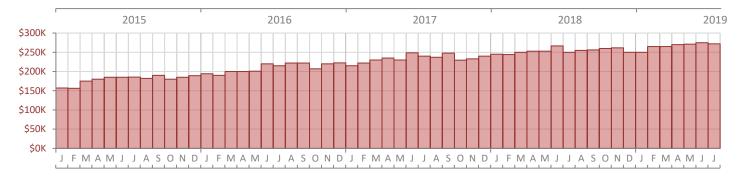

#### Median Sale Price

The median sale price reported for the month (i.e. 50% of sales were above and 50% of sales were below)

**Economists' note**: Median Sale Price is our preferred summary statistic for price activity because, unlike Average Sale Price, Median Sale Price is not sensitive to high sale prices for small numbers of homes that may not be characteristic of the market area. Keep in mind that median price trends over time are not always solely caused by changes in the general value of local real estate. Median sale price only reflects the values of the homes that *sold* each month, and the mix of the types of homes that sell can change over time.

Month	Median Sale Price	Percent Change Year-over-Year
Year-to-Date	\$269,900	7.1%
July 2019	\$271,750	8.7%
June 2019	\$275,000	3.2%
May 2019	\$271,000	7.1%
April 2019	\$269,950	6.8%
March 2019	\$265,000	6.0%
February 2019	\$265,000	8.5%
January 2019	\$250,000	2.0%
December 2018	\$249,900	4.2%
November 2018	\$261,500	12.2%
October 2018	\$259,900	13.3%
September 2018	\$256,000	3.2%
August 2018	\$255,000	7.6%
July 2018	\$250,000	4.2%

#### Average Sale Price

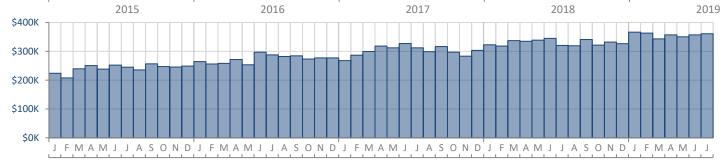

The average sale price reported for the month (i.e. total sales in dollars divided by the number of sales)

*Economists' note*: Usually, we prefer Median Sale Price over Average Sale Price as a summary statistic for home prices. However, Average Sale Price does have its uses—particularly when it is analyzed alongside the Median Sale Price. For one, the relative difference between the two statistics can provide some insight into the market for higher-end homes in an area.

Month	Average Sale Price	Percent Change Year-over-Year
Year-to-Date	\$355,949	7.2%
July 2019	\$361,055	12.6%
June 2019	\$357,092	3.6%

#### Dollar Volume

The sum of the sale prices for all sales which closed during the month

**Economists' note**: Dollar Volume is simply the sum of all sale prices in a given time period, and can quickly be calculated by multiplying Closed Sales by Average Sale Price. It is a strong indicator of the health of the real estate industry in a market, and is of particular interest to real estate professionals, investors, analysts, and government agencies. Potential home sellers and home buyers, on the other hand, will likely be better served by paying attention to trends in the two components of Dollar Volume (i.e. sales and prices) individually.

Month	Dollar Volume	Percent Change Year-over-Year
Year-to-Date	\$2.8 Billion	6.4%
July 2019	\$468.6 Million	22.3%

July 2018	\$383.1 Million	1.6%

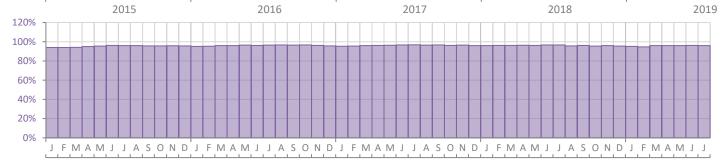

#### Median Percent of Original List Price Received

The median of the sale price (as a percentage of the original list price) across all properties selling during the month

*Economists' note*: The Median Percent of Original List Price Received is useful as an indicator of market recovery, since it typically rises as buyers realize that the market may be moving away from them and they need to match the selling price (or better it) in order to get a contract on the house. This is usually the last measure to indicate a market has shifted from down to up, so it is what we would call a *lagging* indicator.

#### Median Time to Contract

The median number of days between the listing date and contract date for all Closed Sales during the month

*Economists' note*: Like Time to Sale, Time to Contract is a measure of the length of the home selling process calculated for sales which closed during the month. The difference is that Time to Contract measures the number of days between the initial listing of a property and the signing of the contract which eventually led to the closing of the sale. When the gap between Median Time to Contract and Median Time to Sale grows, it is usually a sign of longer closing times and/or declining numbers of cash sales.

Month	Median Time to Contract	Percent Change Year-over-Year
Year-to-Date	33 Days	32.0%
July 2019	28 Days	27.3%
June 2019	26 Days	23.8%
May 2019	33 Days	50.0%
April 2019	32 Days	18.5%
March 2019	30 Days	11.1%
February 2019	49 Days	53.1%
January 2019	36 Days	24.1%
December 2018	27 Days	-3.6%
November 2018	26 Days	0.0%
October 2018	30 Days	-3.2%
September 2018	30 Days	30.4%
August 2018	28 Days	16.7%
July 2018	22 Days	15.8%

#### Median Time to Sale

The median number of days between the listing date and closing date for all Closed Sales during the month

**Economists' note**: Time to Sale is a measure of the length of the home selling process, calculated as the number of days between the initial listing of a property and the closing of the sale. *Median* Time to Sale is the amount of time the "middle" property selling this month was on the market. That is, 50% of homes selling this month took *less* time to sell, and 50% of homes took *more* time to sell. Median Time to Sale gives a more accurate picture than Average Time to Sale, which can be skewed upward by small numbers of properties taking an abnormally long time to sell.

Month	Median Time to Sale	Percent Change Year-over-Year
Year-to-Date	72 Days	9.1%
July 2019	70 Days	14.8%
June 2019	67 Days	6.3%
May 2019	72 Days	12.5%
April 2019	72 Days	9.1%
March 2019	66 Days	0.0%
February 2019	87 Days	19.2%
January 2019	75 Days	2.7%
December 2018	63 Days	-4.5%
November 2018	65 Days	-1.5%
October 2018	68 Days	-10.5%
September 2018	68 Days	1.5%
August 2018	65 Days	3.2%
July 2018	61 Days	-7.6%

# **New Pending Sales**

The number of listed properties that went under contract during the month

**Economists' note**: Because of the typical length of time it takes for a sale to close, economists consider Pending Sales to be a decent indicator of potential future Closed Sales. It is important to bear in mind, however, that not all Pending Sales will be closed successfully. So, the effectiveness of Pending Sales as a future indicator of Closed Sales is susceptible to changes in market conditions such as the availability of financing for homebuyers and the inventory of distressed properties for sale.

Month	New Pending Sales	Percent Change Year-over-Year
Year-to-Date	8,940	0.6%
July 2019	1,218	-1.9%
June 2019	1,233	-1.1%

October 2018	1,112	-8.6%
September 2018	1,072	41.1%
August 2018	1,182	-7.2%
July 2018	1,241	-2.1%

#### **New Listings**

The number of properties put onto the market during the month

**Economists' note**: New Listings tend to rise in delayed response to increasing prices, so they are often seen as a lagging indicator of market health. As prices rise, potential sellers raise their estimations of value—and in the most recent cycle, rising prices have freed up many potential sellers who were previously underwater on their mortgages. Note that in our calculations, we take care to not include properties that were recently taken off the market and quickly relisted, since these are not really *new* listings.

# **Inventory (Active Listings)**

The number of property listings active at the end of the month

**Economists' note**: There are a number of ways to define and calculate Inventory. Our method is to simply count the number of active listings on the last day of the month, and hold this number to compare with the same month the following year. Inventory rises when New Listings are outpacing the number of listings that go off-market (regardless of whether they actually sell). Likewise, it falls when New Listings aren't keeping up with the rate at which homes are going off-market.

Month	Inventory	Percent Change Year-over-Year

## Months Supply of Inventory

An estimate of the number of months it will take to deplete the current Inventory given recent sales rates

*Economists' note*: MSI is a useful indicator of market conditions. The benchmark for a balanced market (favoring neither buyer nor seller) is 5.5 months of inventory. Anything higher is traditionally a buyers' market, and anything lower is a sellers' market. There is no single accepted way of calculating MSI. A common method is to divide current Inventory by the most recent month's Closed Sales count, but this count is a usually poor predictor of future Closed Sales due to seasonal cycles. To eliminate seasonal effects, we use the 12-month average of monthly Closed Sales instead.

Month	Months Supply	Percent Change Year-over-Year
YTD (Monthly Avg)	2.9	7.4%
July 2019	2.6	-7.1%
June 2019	2.8	-3.4%

#### Closed Sales by Sale Price

The number of sales transactions which closed during the month

**Economists' note:** Closed Sales are one of the simplest—yet most important—indicators for the residential real estate market. When comparing Closed Sales across markets of different sizes, we recommend comparing the percent changes in sales rather than the number of sales. Closed Sales (and many other market metrics) are affected by seasonal cycles, so actual trends are more accurately represented by year-over-year changes (i.e. comparing a month's sales to the amount of sales in the same month in the previous year), rather than changes from one month to the next.

#### Median Time to Contract by Sale Price

The median number of days between the listing date and contract date for all Closed Sales during the month

*Economists' note*: Like Time to Sale, Time to Contract is a measure of the length of the home selling process calculated for sales which closed during the month. The difference is that Time to Contract measures the number of days between the initial listing of a property and the signing of the contract which eventually led to the closing of the sale. When the gap between Median Time to Contract and Median Time to Sale grows, it is usually a sign of longer closing times and/or declining numbers of cash sales.

Sale Price	Median Time to Contract	Percent Change Year-over-Year
Less than \$50,000	63 Days	46.5%
\$50,000 - \$99,999	24 Days	71.4%

# New Listings by Initial Listing Price

The number of properties put onto the market during the month

**Economists' note:** New Listings tend to rise in delayed response to increasing prices, so they are often seen as a lagging indicator of market health. As prices rise, potential sellers raise their estimations of value—and in the most recent cycle, rising prices have freed up many potential sellers who were previously underwater on their mortgages. Note that in our calculations, we take care to not include properties that were recently taken off the market and quickly relisted, since these are not really *new* listings.

Initial Listing Price	New Listings	Percent Change Year-over-Year
Less than \$50,000	3	0.0%
\$50,000 - \$99,999	27	-38.6%
\$100,000 - \$149,999	78	-8.2%

\$250,000 - \$299,999	210	8.2%
\$300,000 - \$399,999	248	10.7%
\$400,000 - \$599,999	202	11.0%
\$600,000 - \$999,999	104	30.0%
\$1,000,000 or more	45	28.6%

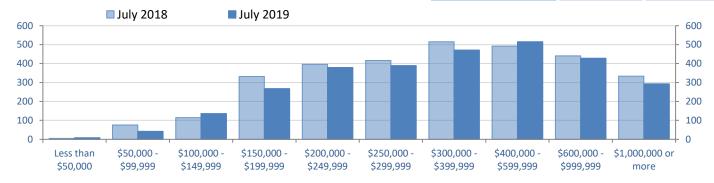

## Inventory by Current Listing Price

The number of property listings active at the end of the month

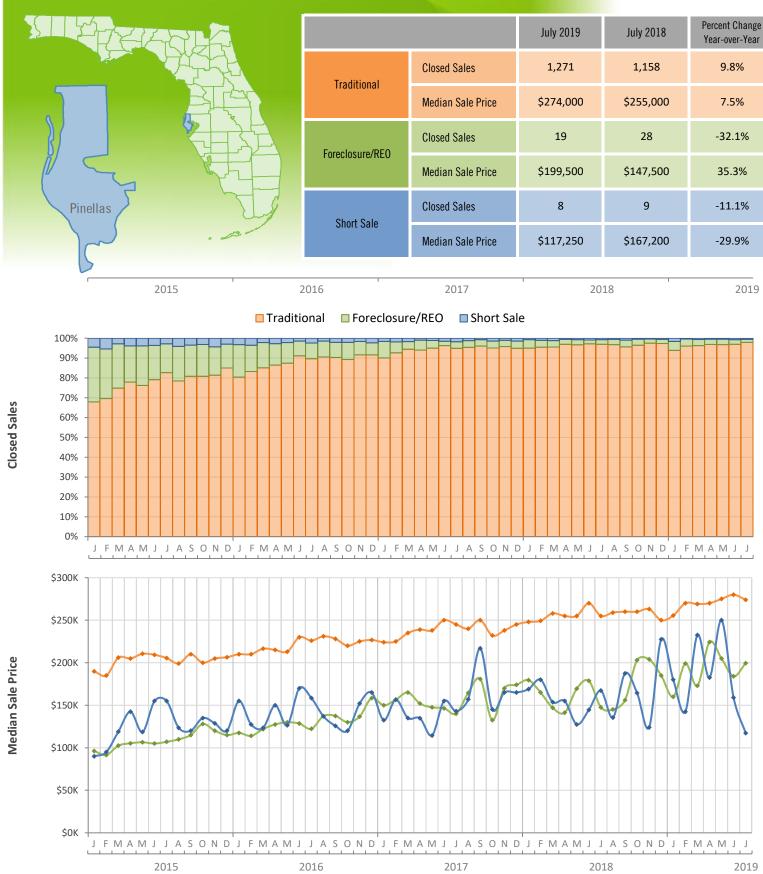

**Economists' note**: There are a number of ways to define and calculate Inventory. Our method is to simply count the number of active listings on the last day of the month, and hold this number to compare with the same month the following year. Inventory rises when New Listings are outpacing the number of listings that go off-market (regardless of whether they actually sell). Likewise, it falls when New Listings aren't keeping up with the rate at which homes are going off-market.

Current Listing Price	Inventory	Percent Change Year-over-Year
Less than \$50,000	8	60.0%
\$50,000 - \$99,999	42	-44.7%
\$100,000 - \$149,999	136	18.3%

## **Closed Sales**

The number of sales transactions which closed during the month

**Economists' note**: Closed Sales are one of the simplest—yet most important—indicators for the residential real estate market. When comparing Closed Sales across markets of different sizes, we recommend comparing the percent changes in sales rather than the number of sales. Closed Sales (and many other market metrics) are affected by seasonal cycles, so actual trends are more accurately represented by year-over-year changes (i.e. comparing a month's sales to the amount of sales in the same month in the previous year), rather than changes from one month to the next.

## Cash Sales

Monthly Market Detail - July 2019

The number of Closed Sales during the month in which buyers exclusively paid in cash

**Economists' note**: Cash Sales can be a useful indicator of the extent to which investors are participating in the market. Why? Investors are far more likely to have the funds to purchase a home available up front, whereas the typical homebuyer requires a mortgage or some other form of financing. There are, of course, many possible exceptions, so this statistic should be interpreted with care.

Month	Cash Sales	Percent Change Year-over-Year
Year-to-Date	2,793	-7.9%
July 2019	373	-7.2%
June 2019	348	-16.1%

November 2018	392	15.3%
October 2018	375	3.9%
September 2018	332	-7.3%
August 2018	394	1.0%
July 2018	402	-2.0%

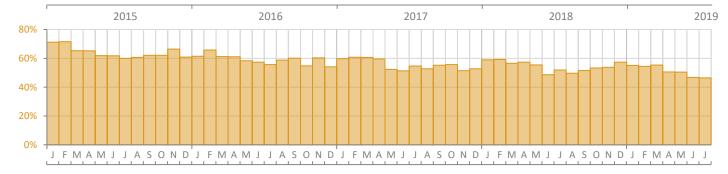

#### Cash Sales as a Percentage of Closed Sales

The percentage of Closed Sales during the month which were Cash Sales

**Economists' note**: This statistic is simply another way of viewing Cash Sales. The remaining percentages of Closed Sales (i.e. those not paid fully in cash) each month involved some sort of financing, such as mortgages, owner/seller financing, assumed loans, etc.

Month	Percent of Closed Sales Paid in Cash	Percent Change Year-over-Year
Year-to-Date	51.1%	-7.4%
July 2019	46.4%	-10.6%
June 2019	46.8%	-3.9%

October 2018	53.3%	-4.1%
September 2018	51.5%	-6.7%
August 2018	49.7%	-5.9%
July 2018	51.9%	-4.9%

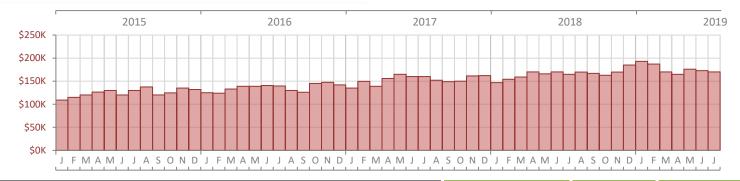

#### Median Sale Price

The median sale price reported for the month (i.e. 50% of sales were above and 50% of sales were below)

**Economists' note**: Median Sale Price is our preferred summary statistic for price activity because, unlike Average Sale Price, Median Sale Price is not sensitive to high sale prices for small numbers of homes that may not be characteristic of the market area. Keep in mind that median price trends over time are not always solely caused by changes in the general value of local real estate. Median sale price only reflects the values of the homes that *sold* each month, and the mix of the types of homes that sell can change over time.

Month	Median Sale Price	Percent Change Year-over-Year
Year-to-Date	\$175,000	7.7%
July 2019	\$170,000	3.1%
June 2019	\$173,000	1.8%
May 2019	\$175,900	6.0%
April 2019	\$165,000	-2.9%
March 2019	\$169,950	6.9%
February 2019	\$187,000	21.4%
January 2019	\$193,000	31.3%
December 2018	\$185,000	14.2%
November 2018	\$169,900	5.2%
October 2018	\$162,750	8.6%
September 2018	\$167,000	12.1%
August 2018	\$169,900	11.8%
July 2018	\$164,900	3.1%

#### Average Sale Price

The average sale price reported for the month (i.e. total sales in dollars divided by the number of sales)

*Economists' note*: Usually, we prefer Median Sale Price over Average Sale Price as a summary statistic for home prices. However, Average Sale Price does have its uses—particularly when it is analyzed alongside the Median Sale Price. For one, the relative difference between the two statistics can provide some insight into the market for higher-end homes in an area.

Month	Average Sale Price	Percent Change Year-over-Year
Year-to-Date	\$279,523	21.2%
July 2019	\$232,726	3.0%
June 2019	\$243,503	-1.8%

#### **Dollar Volume**

The sum of the sale prices for all sales which closed during the month

*Economists' note*: Dollar Volume is simply the sum of all sale prices in a given time period, and can quickly be calculated by multiplying Closed Sales by Average Sale Price. It is a strong indicator of the health of the real estate industry in a market, and is of particular interest to real estate professionals, investors, analysts, and government agencies. Potential home sellers and home buyers, on the other hand, will likely be better served by paying attention to trends in the two components of Dollar Volume (i.e. sales and prices) individually.

#### Median Percent of Original List Price Received

The median of the sale price (as a percentage of the original list price) across all properties selling during the month

**Economists' note**: The Median Percent of Original List Price Received is useful as an indicator of market recovery, since it typically rises as buyers realize that the market may be moving away from them and they need to match the selling price (or better it) in order to get a contract on the house. This is usually the last measure to indicate a market has shifted from down to up, so it is what we would call a *lagging* indicator.

Month	Med. Pct. of Orig. List Price Received	Percent Change Year-over-Year

#### Median Time to Contract

The median number of days between the listing date and contract date for all Closed Sales during the month

*Economists' note*: Like Time to Sale, Time to Contract is a measure of the length of the home selling process calculated for sales which closed during the month. The difference is that Time to Contract measures the number of days between the initial listing of a property and the signing of the contract which eventually led to the closing of the sale. When the gap between Median Time to Contract and Median Time to Sale grows, it is usually a sign of longer closing times and/or declining numbers of cash sales.

July 2018	31 Days	-3.1%

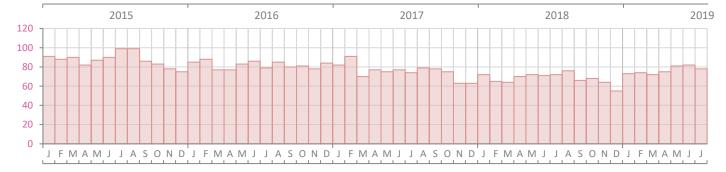

#### Median Time to Sale

The median number of days between the listing date and closing date for all Closed Sales during the month

**Economists' note**: Time to Sale is a measure of the length of the home selling process, calculated as the number of days between the initial listing of a property and the closing of the sale. *Median* Time to Sale is the amount of time the "middle" property selling this month was on the market. That is, 50% of homes selling this month took *less* time to sell, and 50% of homes took *more* time to sell. Median Time to Sale gives a more accurate picture than Average Time to Sale, which can be skewed upward by small numbers of properties taking an abnormally long time to sell.

# **New Pending Sales**

The number of listed properties that went under contract during the month

**Economists' note**: Because of the typical length of time it takes for a sale to close, economists consider Pending Sales to be a decent indicator of potential future Closed Sales. It is important to bear in mind, however, that not all Pending Sales will be closed successfully. So, the effectiveness of Pending Sales as a future indicator of Closed Sales is susceptible to changes in market conditions such as the availability of financing for homebuyers and the inventory of distressed properties for sale.

Month	New Pending Sales	Percent Change Year-over-Year
Year-to-Date	6,004	-0.1%
July 2019	773	3.5%
June 2019	768	-1.7%
May 2019	851	-6.3%

January 2019	789	-8.1%
December 2018	624	-2.8%
November 2018	713	-0.1%
October 2018	691	-11.3%
September 2018	674	31.1%
August 2018	778	-9.7%
July 2018	747	-0.3%

#### **New Listings**

The number of properties put onto the market during the month

Economists' note: New Listings tend to rise in delayed response to increasing prices, so they are often seen as a lagging indicator of market health. As prices rise, potential sellers raise their estimations of value—and in the most recent cycle, rising prices have freed up many potential sellers who were previously underwater on their mortgages. Note that in our calculations, we take care to not include properties that were recently taken off the market and quickly relisted, since these are not really new listings.

# Inventory (Active Listings)

The number of property listings active at the end of the month

**Economists' note**: There are a number of ways to define and calculate Inventory. Our method is to simply count the number of active listings on the last day of the month, and hold this number to compare with the same month the following year. Inventory rises when New Listings are outpacing the number of listings that go off-market (regardless of whether they actually sell). Likewise, it falls when New Listings aren't keeping up with the rate at which homes are going off-market.

## Months Supply of Inventory

An estimate of the number of months it will take to deplete the current Inventory given recent sales rates

*Economists' note*: MSI is a useful indicator of market conditions. The benchmark for a balanced market (favoring neither buyer nor seller) is 5.5 months of inventory. Anything higher is traditionally a buyers' market, and anything lower is a sellers' market. There is no single accepted way of calculating MSI. A common method is to divide current Inventory by the most recent month's Closed Sales count, but this count is a usually poor predictor of future Closed Sales due to seasonal cycles. To eliminate seasonal effects, we use the 12-month average of monthly Closed Sales instead.

Month	Months Supply	Percent Change Year-over-Year
YTD (Monthly Avg)	3.3	13.8%
July 2019	2.8	0.0%
June 2019	3.1	10.7%
May 2019	3.2	10.3%
April 2019	3.4	13.3%
March 2019	3.5	20.7%
February 2019	3.7	19.4%
January 2019	3.7	27.6%
December 2018	3.3	22.2%
November 2018	3.2	10.3%
October 2018	3.0	7.1%
September 2018	2.7	-3.6%
August 2018	2.7	0.0%
July 2018	2.8	-3.4%

### Closed Sales by Sale Price

The number of sales transactions which closed during the month

**Economists' note:** Closed Sales are one of the simplest—yet most important—indicators for the residential real estate market. When comparing Closed Sales across markets of different sizes, we recommend comparing the percent changes in sales rather than the number of sales. Closed Sales (and many other market metrics) are affected by seasonal cycles, so actual trends are more accurately represented by year-over-year changes (i.e. comparing a month's sales to the amount of sales in the same month in the previous year), rather than changes from one month to the next.

Sale Price	Closed Sales	Percent Change Year-over-Year
Less than \$50,000	15	7.1%
\$50,000 - \$99,999	150	-3.8%
\$100,000 - \$149,999	173	2.4%
\$150,000 - \$199,999	131	-1.5%
\$200,000 - \$249,999	87	17.6%
\$250,000 - \$299,999	67	24.1%
\$300,000 - \$399,999	71	-17.4%
\$400,000 - \$599,999	70	42.9%
\$600,000 - \$999,999	30	7.1%
\$1,000,000 or more	10	-9.1%

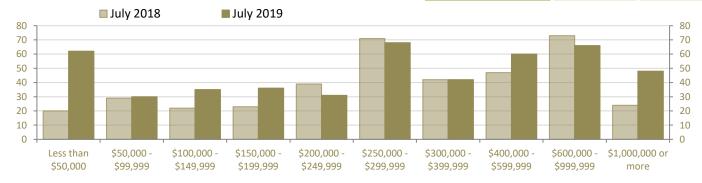

#### Median Time to Contract by Sale Price

The median number of days between the listing date and contract date for all Closed Sales during the month

*Economists' note*: Like Time to Sale, Time to Contract is a measure of the length of the home selling process calculated for sales which closed during the month. The difference is that Time to Contract measures the number of days between the initial listing of a property and the signing of the contract which eventually led to the closing of the sale. When the gap between Median Time to Contract and Median Time to Sale grows, it is usually a sign of longer closing times and/or declining numbers of cash sales.

Sale Price	Median Time to Contract	Percent Change Year-over-Year
Less than \$50,000	62 Days	210.0%
\$50,000 - \$99,999	30 Days	3.4%
