Pasco County Real Estate Statistics for April 2020

The two biggest statistical changes in the market, number of active listings and transactions, saw expected decreases because of COVID-19. Pasco saw an increase in average sale price and median sale price for both Single Family Homes and Townhomes/Condos in April 2020. The Average Sale Price for Single Family Homes rose 11.9% from \$234,027 in April 2019 to \$261,985 in April 2020. The Average Sale Price for Townhome/Condo was up 27.6% from \$135,073 in April 2019 to \$172,361 in April 2020. The Median Sale Price for Single Family Homes increased 15.9% from \$213,150 in April 2019 to \$247,000 in April 2020. The Median Sale Price for Townhomes/Condos was up 30.4% from \$135,000 in April 2019 to \$176,000 in April 2020. Additionally, Single Family Homes were closing faster in April 2020. The Median Time to Contract for Single Family Homes decreased 32.4% from 34 days in April 2019 to 23 days in April 2020. The Median Time to Sale for Single Family Homes decreased 12.8% year-over-year from 78 days in April 2019 to 68 days in April 2020.

Dollar Volume for Single Family Homes saw a 1.9% decrease from \$229.3 million in April 2019 to \$225.0 million in April 2020. Paid in Cash sales for Single Family homes decreased 47.0% year-over-year from 217 in April 2019 to 115 in April 2020. The Months Supply of Inventory for Single Family Homes decreased 22.2% year-over-year, with 2.1 months in April 2020 compared to 2.7 months in April 2019. The Active Listings for Single Family Homes decreased 17.4% year-over-year from 2,364 in April 2019 to 1,953 in April 2020. New Listings for Single Family homes for April 2020 were 873, down 20.1% from last April 2019, at 1,093. **Closed Sales for Single Family saw a 12.3% decrease, from 980 in April 2019 to 859 in April 2020.**

The Median Time to Contract for Townhome/Condo market was up 2.9%, from 34 days in April 2019 to 35 days in April 2020. The Median Time to Sale for Townhome/Condo market increased 12.2% from 74 days in April 2019 to 83 days in April 2020. Dollar Volume for Townhome/Condo saw a 1.4% decrease from \$28.5 million in April 2019 to \$28.1 million in April 2020. Paid in Cash sales for Townhome/Condo decreased 43.4% from 99 in April 2019 to 56 in April 2020. The Months Supply of Inventory for Townhome/Condo decreased 9.1% from 3.3 months in April 2019 to 3.0 months in April 2020. Active Listings for Townhomes/Condos decreased 2.7% from 548 in April 2019 to 533 in April 2020. New Listings for Townhome/Condos decreased 6.7% from 194 in April 2019 to 181 in April 2020. **Closed Sales for the Townhome/Condo segment decreased 22.7% from 211 in April 2019 to 163 in April 2020.**

Absorption rate estimates the rate at which active listings are selling in a given market.

It's calculated by dividing the number of closed sales by the number of active listings.

A low absorption rate means that homes are selling slowly (suggesting a buyer's market) while a high absorption rate means that homes are selling quickly (suggesting a seller's market).

Closed Sales

The number of sales transactions which closed during the month

Economists' note: Closed Sales are one of the simplest—yet most important—indicators for the residential real estate market. When comparing Closed Sales across markets of different sizes, we recommend comparing the percent changes in sales rather than the number of sales. Closed Sales (and many other market metrics) are affected by seasonal cycles, so actual trends are more accurately represented by year-over-year changes (i.e. comparing a month's sales to the amount of sales in the same month in the previous year), rather than changes from one month to the next.

Month	Closed Sales	Percent Change Year-over-Year
Year-to-Date	3,359	1.8%
April 2020	859	-12.3%
March 2020	1,023	6.0%
February 2020	832	14.3%

December 2019	932	21.8%
November 2019	907	8.9%
October 2019	838	-5.2%
September 2019	900	14.1%
August 2019	1,002	5.5%
July 2019	1,080	14.8%
June 2019	994	-7.9%
May 2019	1,144	0.1%
April 2019	980	9.5%

Cash Sales

The number of Closed Sales during the month in which buyers exclusively paid in cash

Economists' note: Cash Sales can be a useful indicator of the extent to which investors are participating in the market. Why? Investors are far more likely to have the funds to purchase a home available up front, whereas the typical homebuyer requires a mortgage or some other form of financing. There are, of course, many possible exceptions, so this statistic should be interpreted with care.

Month	Cash Sales	Percent Change Year-over-Year

May 2019	252	-4.9%
April 2019	217	0.5%

Cash Sales as a Percentage of Closed Sales

The percentage of Closed Sales during the month which were Cash Sales

Economists' note: This statistic is simply another way of viewing Cash Sales. The remaining percentages of Closed Sales (i.e. those not paid fully in cash) each month involved some sort of financing, such as mortgages, owner/seller financing, assumed loans, etc.

Month	Percent of Closed Sales Paid in Cash	Percent Change Year-over-Year
Year-to-Date	21.9%	-14.8%
April 2020	13.4%	-39.4%
March 2020	22.6%	-4.6%

May 2019	22.0%	-5.2%
April 2019	22.1%	-8.3%

Median Sale Price

The median sale price reported for the month (i.e. 50% of sales were above and 50% of sales were below)

Economists' note: Median Sale Price is our preferred summary statistic for price activity because, unlike Average Sale Price, Median Sale Price is not sensitive to high sale prices for small numbers of homes that may not be characteristic of the market area. Keep in mind that median price trends over time are not always solely caused by changes in the general value of local real estate. Median sale price only reflects the values of the homes that *sold* each month, and the mix of the types of homes that sell can change over time.

Month	Median Sale Price	Percent Change Year-over-Year
Year-to-Date	\$239,990	11.6%
April 2020	\$247,000	15.9%
March 2020	\$240,000	9.1%

December 2019	\$245,250	11.5%
November 2019	\$245,000	11.4%
October 2019	\$229,790	6.9%
September 2019	\$236,750	9.7%
August 2019	\$240,500	7.7%
July 2019	\$238,000	10.2%
June 2019	\$230,500	3.8%
May 2019	\$223,745	4.1%
April 2019	\$213,150	-2.1%

Average Sale Price

The average sale price reported for the month (i.e. total sales in dollars divided by the number of sales)

Economists' note: Usually, we prefer Median Sale Price over Average Sale Price as a summary statistic for home prices. However, Average Sale Price does have its uses—particularly when it is analyzed alongside the Median Sale Price. For one, the relative difference between the two statistics can provide some insight into the market for higher-end homes in an area.

Month	Average Sale Price	Percent Change Year-over-Year
Year-to-Date	\$253,409	7.9%
April 2020	\$261,985	11.9%
March 2020	\$254,049	7.0%
February 2020	\$248,274	5.9%
January 2020	\$247,597	6.3%
December 2019	\$260,947	9.6%
November 2019	\$259,672	10.4%
October 2019	\$249,810	6.4%
September 2019	\$244,362	6.8%
August 2019	\$257,352	9.9%
July 2019	\$254,174	8.8%
June 2019	\$246,500	3.8%
May 2019	\$236,677	2.3%
April 2019	\$234,027	2.0%

Dollar Volume

The sum of the sale prices for all sales which closed during the month

Economists' note: Dollar Volume is simply the sum of all sale prices in a given time period, and can quickly be calculated by multiplying Closed Sales by Average Sale Price. It is a strong indicator of the health of the real estate industry in a market, and is of particular interest to real estate professionals, investors, analysts, and government agencies. Potential home sellers and home buyers, on the other hand, will likely be better served by paying attention to trends in the two components of Dollar Volume (i.e. sales and prices) individually.

Month	Dollar Volume	Percent Change Year-over-Year
Year-to-Date	\$851.2 Million	9.8%
April 2020	\$225.0 Million	-1.9%
March 2020	\$259.9 Million	13.4%
February 2020	\$206.6 Million	21.0%
January 2020	\$159.7 Million	9.5%
December 2019	\$243.2 Million	33.5%
November 2019	\$235.5 Million	20.2%
October 2019	\$209.3 Million	0.9%
September 2019	\$219.9 Million	21.8%
August 2019	\$257.9 Million	15.9%
July 2019	\$274.5 Million	24.9%
June 2019	\$245.0 Million	-4.4%
May 2019	\$270.8 Million	2.4%
April 2019	\$229.3 Million	11.7%

Median Percent of Original List Price Received

The median of the sale price (as a percentage of the original list price) across all properties selling during the month

Economists' note: The Median Percent of Original List Price Received is useful as an indicator of market recovery, since it typically rises as buyers realize that the market may be moving away from them and they need to match the selling price (or better it) in order to get a contract on the house. This is usually the last measure to indicate a market has shifted from down to up, so it is what we would call a *lagging* indicator.

Month	Med. Pct. of Orig. List Price Received	Percent Change Year-over-Year
Year-to-Date	97.3%	1.0%
April 2020	97.9%	0.9%
March 2020	97.4%	1.5%
February 2020	97.0%	0.8%
January 2020	96.7%	1.0%
December 2019	97.1%	0.7%
November 2019	96.9%	0.7%
October 2019	97.3%	0.8%
September 2019	97.1%	0.3%
August 2019	97.3%	0.2%
July 2019	97.4%	0.4%
June 2019	96.9%	-0.4%
May 2019	96.9%	-0.3%
April 2019	97.0%	-0.3%

Median Time to Contract

The median number of days between the listing date and contract date for all Closed Sales during the month

Economists' note: Like Time to Sale, Time to Contract is a measure of the length of the home selling process calculated for sales which closed during the month. The difference is that Time to Contract measures the number of days between the initial listing of a property and the signing of the contract which eventually led to the closing of the sale. When the gap between Median Time to Contract and Median Time to Sale grows, it is usually a sign of longer closing times and/or declining numbers of cash sales.

Month	Median Time to Contract	Percent Change Year-over-Year
Year-to-Date	34 Days	-15.0%
April 2020	23 Days	-32.4%
March 2020	32 Days	-23.8%
February 2020	46 Days	7.0%
January 2020	36 Days	-12.2%
December 2019	29 Days	-12.1%
November 2019	30 Days	-9.1%
October 2019	31 Days	-13.9%
September 2019	33 Days	17.9%
August 2019	29 Days	7.4%
July 2019	25 Days	-10.7%
June 2019	34 Days	17.2%
May 2019	32 Days	14.3%
April 2019	34 Days	13.3%

Median Time to Sale

The median number of days between the listing date and closing date for all Closed Sales during the month

Economists' note: Time to Sale is a measure of the length of the home selling process, calculated as the number of days between the initial listing of a property and the closing of the sale. *Median Time to Sale* is the amount of time the "middle" property selling this month was on the market. That is, 50% of homes selling this month took *less* time to sell, and 50% of homes took *more* time to sell. Median Time to Sale gives a more accurate picture than Average Time to Sale, which can be skewed upward by small numbers of properties taking an abnormally long time to sell.

Month	Median Time to Sale	Percent Change Year-over-Year
Year-to-Date	76 Days	-9.5%
April 2020	68 Days	-12.8%
March 2020	72 Days	-16.3%
February 2020	89 Days	0.0%
January 2020	80 Days	-3.6%
December 2019	70 Days	-5.4%
November 2019	73 Days	-6.4%
October 2019	70 Days	-9.1%
September 2019	75 Days	8.7%
August 2019	70 Days	4.5%
July 2019	70 Days	-2.8%
June 2019	78 Days	6.8%
May 2019	76 Days	4.1%
April 2019	78 Days	5.4%

New Pending Sales

The number of listed properties that went under contract during the month

Economists' note: Because of the typical length of time it takes for a sale to close, economists consider Pending Sales to be a decent indicator of potential future Closed Sales. It is important to bear in mind, however, that not all Pending Sales will be closed successfully. So, the effectiveness of Pending Sales as a future indicator of Closed Sales is susceptible to changes in market conditions such as the availability of financing for homebuyers and the inventory of distressed properties for sale.

Month	New Pending Sales	Percent Change Year-over-Year
Year-to-Date	3,869	-7.0%
April 2020	834	-22.2%
March 2020	959	-18.5%

June 2019	976	2.8%
May 2019	1,122	-0.8%
April 2019	1,072	-7.8%

New Listings

The number of properties put onto the market during the month

Economists' note: New Listings tend to rise in delayed response to increasing prices, so they are often seen as a lagging indicator of market health. As prices rise, potential sellers raise their estimations of value—and in the most recent cycle, rising prices have freed up many potential sellers who were previously underwater on their mortgages. Note that in our calculations, we take care to not include properties that were recently taken off the market and quickly relisted, since these are not really *new* listings.

Month	New Listings	Percent Change Year-over-Year
Year-to-Date	4,051	-6.5%
April 2020	873	-20.1%
March 2020	1,106	-0.8%

May 2019	1,222	-0.7%
April 2019	1,093	-5.9%

Inventory (Active Listings)

The number of property listings active at the end of the month

Economists' note: There are a number of ways to define and calculate Inventory. Our method is to simply count the number of active listings on the last day of the month, and hold this number to compare with the same month the following year. Inventory rises when New Listings are outpacing the number of listings that go off-market (regardless of whether they actually sell). Likewise, it falls when New Listings aren't keeping up with the rate at which homes are going off-market.

Month	Inventory	Percent Change Year-over-Year
YTD (Monthly Avg)	2,009	-18.5%
April 2020	1,953	-17.4%
March 2020	1,985	-15.1%
February 2020	1,985	-21.4%
January 2020	2,111	-19.9%

April 2019	2,364	4.4%

Months Supply of Inventory

An estimate of the number of months it will take to deplete the current Inventory given recent sales rates

Economists' note: MSI is a useful indicator of market conditions. The benchmark for a balanced market (favoring neither buyer nor seller) is 5.5 months of inventory. Anything higher is traditionally a buyers' market, and anything lower is a sellers' market. There is no single accepted way of calculating MSI. A common method is to divide current Inventory by the most recent month's Closed Sales count, but this count is a usually poor predictor of future Closed Sales due to seasonal cycles. To eliminate seasonal effects, we use the 12-month average of monthly Closed Sales instead.

Month	Months Supply	Percent Change Year-over-Year
YTD (Monthly Avg)	2.0	-28.6%
April 2020	2.1	-22.2%
March 2020	2.1	-19.2%

Closed Sales by Sale Price

The number of sales transactions which closed during the month

Economists' note: Closed Sales are one of the simplest—yet most important—indicators for the residential real estate market. When comparing Closed Sales across markets of different sizes, we recommend comparing the percent changes in sales rather than the number of sales. Closed Sales (and many other market metrics) are affected by seasonal cycles, so actual trends are more accurately represented by year-over-year changes (i.e. comparing a month's sales to the amount of sales in the same month in the previous year), rather than changes from one month to the next.

Median Time to Contract by Sale Price

The median number of days between the listing date and contract date for all Closed Sales during the month

Economists' note: Like Time to Sale, Time to Contract is a measure of the length of the home selling process calculated for sales which closed during the month. The difference is that Time to Contract measures the number of days between the initial listing of a property and the signing of the contract which eventually led to the closing of the sale. When the gap between Median Time to Contract and Median Time to Sale grows, it is usually a sign of longer closing times and/or declining numbers of cash sales.

New Listings by Initial Listing Price

The number of properties put onto the market during the month

Economists' note: New Listings tend to rise in delayed response to increasing prices, so they are often seen as a lagging indicator of market health. As prices rise, potential sellers raise their estimations of value—and in the most recent cycle, rising prices have freed up many potential sellers who were previously underwater on their mortgages. Note that in our calculations, we take care to not include properties that were recently taken off the market and quickly relisted, since these are not really *new* listings.

Inventory by Current Listing Price

The number of property listings active at the end of the month

Economists' note: There are a number of ways to define and calculate Inventory. Our method is to simply count the number of active listings on the last day of the month, and hold this number to compare with the same month the following year. Inventory rises when New Listings are outpacing the number of listings that go off-market (regardless of whether they actually sell). Likewise, it falls when New Listings aren't keeping up with the rate at which homes are going off-market.

Closed Sales

The number of sales transactions which closed during the month

Economists' note: Closed Sales are one of the simplest—yet most important—indicators for the residential real estate market. When comparing Closed Sales across markets of different sizes, we recommend comparing the percent changes in sales rather than the number of sales. Closed Sales (and many other market metrics) are affected by seasonal cycles, so actual trends are more accurately represented by year-over-year changes (i.e. comparing a month's sales to the amount of sales in the same month in the previous year), rather than changes from one month to the next.

Cash Sales

The number of Closed Sales during the month in which buyers exclusively paid in cash

Economists' note: Cash Sales can be a useful indicator of the extent to which investors are participating in the market. Why? Investors are far more likely to have the funds to purchase a home available up front, whereas the typical homebuyer requires a mortgage or some other form of financing. There are, of course, many possible exceptions, so this statistic should be interpreted with care.

Cash Sales as a Percentage of Closed Sales

The percentage of Closed Sales during the month which were Cash Sales

Economists' note: This statistic is simply another way of viewing Cash Sales. The remaining percentages of Closed Sales (i.e. those not paid fully in cash) each month involved some sort of financing, such as mortgages, owner/seller financing, assumed loans, etc.

Month	Percent of Closed Sales Paid in Cash	Percent Change Year-over-Year

Median Sale Price

The median sale price reported for the month (i.e. 50% of sales were above and 50% of sales were below)

Economists' note: Median Sale Price is our preferred summary statistic for price activity because, unlike Average Sale Price, Median Sale Price is not sensitive to high sale prices for small numbers of homes that may not be characteristic of the market area. Keep in mind that median price trends over time are not always solely caused by changes in the general value of local real estate. Median sale price only reflects the values of the homes that *sold* each month, and the mix of the types of homes that sell can change over time.

Average Sale Price

The average sale price reported for the month (i.e. total sales in dollars divided by the number of sales)

Economists' note: Usually, we prefer Median Sale Price over Average Sale Price as a summary statistic for home prices. However, Average Sale Price does have its uses—particularly when it is analyzed alongside the Median Sale Price. For one, the relative difference between the two statistics can provide some insight into the market for higher-end homes in an area.

Dollar Volume

The sum of the sale prices for all sales which closed during the month

Economists' note: Dollar Volume is simply the sum of all sale prices in a given time period, and can quickly be calculated by multiplying Closed Sales by Average Sale Price. It is a strong indicator of the health of the real estate industry in a market, and is of particular interest to real estate professionals, investors, analysts, and government agencies. Potential home sellers and home buyers, on the other hand, will likely be better served by paying attention to trends in the two components of Dollar Volume (i.e. sales and prices) individually.

Median Percent of Original List Price Received

The median of the sale price (as a percentage of the original list price) across all properties selling during the month

Economists' note: The Median Percent of Original List Price Received is useful as an indicator of market recovery, since it typically rises as buyers realize that the market may be moving away from them and they need to match the selling price (or better it) in order to get a contract on the house. This is usually the last measure to indicate a market has shifted from down to up, so it is what we would call a *lagging* indicator.

Median Time to Contract

The median number of days between the listing date and contract date for all Closed Sales during the month

Economists' note: Like Time to Sale, Time to Contract is a measure of the length of the home selling process calculated for sales which closed during the month. The difference is that Time to Contract measures the number of days between the initial listing of a property and the signing of the contract which eventually led to the closing of the sale. When the gap between Median Time to Contract and Median Time to Sale grows, it is usually a sign of longer closing times and/or declining numbers of cash sales.

Median Time to Sale

The median number of days between the listing date and closing date for all Closed Sales during the month

Economists' note: Time to Sale is a measure of the length of the home selling process, calculated as the number of days between the initial listing of a property and the closing of the sale. *Median Time to Sale* is the amount of time the "middle" property selling this month was on the market. That is, 50% of homes selling this month took *less* time to sell, and 50% of homes took *more* time to sell. Median Time to Sale gives a more accurate picture than Average Time to Sale, which can be skewed upward by small numbers of properties taking an abnormally long time to sell.

New Pending Sales

The number of listed properties that went under contract during the month

Economists' note: Because of the typical length of time it takes for a sale to close, economists consider Pending Sales to be a decent indicator of potential future Closed Sales. It is important to bear in mind, however, that not all Pending Sales will be closed successfully. So, the effectiveness of Pending Sales as a future indicator of Closed Sales is susceptible to changes in market conditions such as the availability of financing for homebuyers and the inventory of distressed properties for sale.

Inventory (Active Listings)

The number of property listings active at the end of the month

Economists' note: There are a number of ways to define and calculate Inventory. Our method is to simply count the number of active listings on the last day of the month, and hold this number to compare with the same month the following year. Inventory rises when New Listings are outpacing the number of listings that go off-market (regardless of whether they actually sell). Likewise, it falls when New Listings aren't keeping up with the rate at which homes are going off-market.

Months Supply of Inventory

An estimate of the number of months it will take to deplete the current Inventory given recent sales rates

Economists' note: MSI is a useful indicator of market conditions. The benchmark for a balanced market (favoring neither buyer nor seller) is 5.5 months of inventory. Anything higher is traditionally a buyers' market, and anything lower is a sellers' market. There is no single accepted way of calculating MSI. A common method is to divide current Inventory by the most recent month's Closed Sales count, but this count is a usually poor predictor of future Closed Sales due to seasonal cycles. To eliminate seasonal effects, we use the 12-month average of monthly Closed Sales instead.

Inventory by Current Listing Price

The number of property listings active at the end of the month

Economists' note: There are a number of ways to define and calculate Inventory. Our method is to simply count the number of active listings on the last day of the month, and hold this number to compare with the same month the following year. Inventory rises when New Listings are outpacing the number of listings that go off-market (regardless of whether they actually sell). Likewise, it falls when New Listings aren't keeping up with the rate at which homes are going off-market.
